Extraterrestres (Portuguese Edition) Salvador Nogueira

Nossa galáxia tem pelo menos 100 bilhões de estrelas (embora há quem diga que ela tem até quatro vezes mais que isso). Entre elas, são pelo menos 20 bilhões de astros parecidos com o Sol. Se 22% deles têm um mundo potencialmente habitável, do tipo terrestre, estamos falando de 4,4 bilhões de planetas aptos ao surgimento da vida. Isso só na nossa galáxia. Agora considere a probabilidade de você acertar os números da Mega Sena. Apostando em seis dezenas, a chance de acertar tudo é de uma em 50 milhões. Agora imagine que a chance de um planeta habitável de fato desenvolver vida seja igualmente improvável. Ainda assim, teríamos 23 mundos habitados, só na Via Láctea. Se extrapolarmos para o total de galáxias existentes no Universo observável – estima-se, grosseiramente, em 100 bilhões –, temos aí 2,3 trilhões de biosferas no cosmos. E isso supondo que a possibilidade de a vida surgir seja tão pequena quanto a de ganharmos na Mega Sena. A maioria dos cientistas que estudam o assunto tende a crer que o surgimento de formas biológicas seja bem mais corriqueiro que isso. O objetivo deste livro é apresentar a busca pela vida fora da terra – talvez a mais intrigante e importante busca da história da humanidade – em todas as suas nuances.
