Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control)

Tao Liu, Furong Gao

Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) Tao Liu, Furong Gao

Industrial Process Identification and Control Design is devoted to advanced identification and control methods for the operation of continuous-time processes both with and without time delay, in industrial and chemical engineering practice.

The simple and practical step- or relay-feedback test is employed when applying the proposed identification techniques, which are classified in terms of common industrial process type: open-loop stable; integrating; and unstable, respectively. Correspondingly, control system design and tuning models that follow are presented for single-input-single-output processes.

Furthermore, new two-degree-of-freedom control strategies and cascade control system design methods are explored with reference to independently-improving, set-point tracking and load disturbance rejection. Decoupling, multi-loop, and decentralized control techniques for the operation of multiple-input-multiple-output processes are also detailed. Perfect tracking of a desire output trajectory is realized using iterative learning control in uncertain industrial batch processes.

All the proposed methods are presented in an easy-to-follow style, illustrated by examples and practical applications. This book will be valuable for researchers in system identification and control theory, and will also be of interest to graduate control students from process, chemical, and electrical engineering backgrounds and to practising control engineers in the process industry.

From reader reviews:

Cindy Martin:

Have you spare time for a day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity for spend your time. Any person spent their own spare time to take a wander, shopping, or went to typically the Mall. How about open or maybe read a book eligible Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control)? Maybe it is to become best activity for you. You understand beside you can spend your time along with your favorite's book, you can better than before. Do you agree with it is opinion or you have additional opinion?

Jerry Day:

The book Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) give you a sense of feeling enjoy for your spare time. You need to use to make your capable a lot more increase. Book can to become your best friend when you getting stress or having big problem together with your subject. If you can make examining a book Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) to get your habit, you can get considerably more advantages, like add your own capable, increase your knowledge about several or all subjects. You can know everything if you like available and read a publication Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control). Kinds of book are several. It means that, science guide or encyclopedia or other people. So , how do you think about this publication?

Margaret Wynkoop:

The particular book Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) will bring someone to the new experience of reading the book. The author style to spell out the idea is very unique. In the event you try to find new book you just read, this book very suited to you. The book Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) is much recommended to you to study. You can also get the e-book through the official web site, so you can more easily to read the book.

Roger Alford:

Your reading 6th sense will not betray a person, why because this Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) book written by well-known writer who knows well how to make book that may be understand by anyone who also read the book. Written inside good manner for you, leaking every ideas and writing skill only for eliminate your current hunger then you still doubt Industrial Process Identification and Control Design: Step-test and Relay-experiment-based Methods (Advances in Industrial Control) as good book not simply by the

cover but also with the content. This is one e-book that can break don't assess book by its cover, so do you still needing another sixth sense to pick this specific!? Oh come on your examining sixth sense already said so why you have to listening to a different sixth sense.
