Revising Green Infrastructure: Concepts Between Nature and Design

Consider this ...

- How do we handle the convergence of landscape architecture, ecological planning, and civil engineering?
- What are convenient terms and metaphors to communicate the interplay between design and ecology?
- What are suitable scientific theories and technological means?
- What innovations arise from multidisciplinary and cross-scalar approaches?
- What are appropriate aesthetic statements and spatial concepts?
- What instruments and tools should be applied?

Revising Green Infrastructure: Concepts Between Nature and Design examines these questions and presents innovative approaches in designing *green, landscape or nature* as infrastructure from different perspectives and attitudes instead of adding another definition or category of green infrastructure. The editors bring together the work of selected ecologists, engineers, and landscape architects who discuss a variety of theoretical aspects, research projects, teaching methods, and best practice examples in green infrastructure. The approaches range from retrofitting existing infrastructures through landscape-based integrations of new infrastructures and envisioning prospective landscapes as hybrids, machines, or cultural extensions.

The book explores a scientific functional approach in landscape architecture. It begins with an overview of green functionalism and includes examples of how new design logics are deduced from ecology in order to meet economic and environmental requirements and open new aesthetic relationships toward nature. The contributors share a decidedly cultural perspective on nature as landscape. Their ecological view emphasizes the individual nature of specific local situations.

Building on this foundation, the subsequent chapters present political ideas and programs defining social relations toward nature and their integration in different planning systems as well as their impact on nature and society. They explore different ways of participation and cooperation within cities, regions, and nations. They then describe projects implemented in local contexts to solve concrete problems or remediate

malfunctions. These projects illustrate the full scope presented and discussed throughout the book: the use of scientific knowledge, strategic thinking, communication with municipal authorities and local stakeholders, design implementation on site, and documentation and control of feedback and outcome with adequate indicators and metrics.

Although diverse and sometimes controversial, the discussion of how nature is regarded in contrast to society, how human-natural systems could be organized, and how nature could be changed, optimized, or designed raises the question of whether there is a new paradigm for the design of social relations to nature. The multidisciplinary review in this book brings together discussions previously held only within the respective disciplines, and demonstrates how they can be used to develop new methods and remediation strategies.

From reader reviews:

Robert Haas:

In this 21st century, people become competitive in each way. By being competitive now, people have to do something to make themselves survive, being in the middle of the particular crowded place and notice through their surroundings. One thing that occasionally many people have underestimated that for a while is reading. Yeah, by reading a guide your ability to survive enhances then having a chance to stand out than others is high. For you personally who want to start reading a new book, we give you this specific *Revising Green Infrastructure: Concepts Between Nature and Design* book as a beginner and daily reading reserve. Why, because this book is more than just a book.

Elmer August:

Revising Green Infrastructure: Concepts Between Nature and Design can be one of your basic books that are a good idea. Many of us recommend that straight away because this reserve has good vocabulary that can increase your knowledge in vocab, easy to understand, bit entertaining but still delivering the information. The article writer giving his/her effort to put every word into satisfaction arrangement in writing *Revising Green Infrastructure: Concepts Between Nature and Design* however doesn't forget the main level, giving the reader the hottest as well as based confirmed resource facts that maybe you can be one of it. This great information may draw you into a fresh stage of crucial considering.

Amanda Acuna:

The book titled *Revising Green Infrastructure: Concepts Between Nature and Design* contains a lot of information on the idea. The writer explains the idea with an easy approach. The language is very simple to implement all the people, so do not definitely worry, you can easily read the item. The book was authored by a famous author. The author will bring you in the new time of literary works. You can read this book because you can continue reading your smart phone, or model, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site as well as order it. Have a nice read.

Corey Barksdale:

That publication can make you feel relaxed. This book *Revising Green Infrastructure: Concepts Between Nature and Design* was colorful and of course has pictures on there. As we know that book *Revising Green Infrastructure: Concepts Between Nature and Design* has many kinds or styles. Start from kids until young adults. For example *Naruto* or *Private Eye Conan* you can read and feel that you are the character on there. So, not at all of the books are generally make you bored, any it offers you feel happy, fun and relaxed. Try to choose the best book for yourself and try to like reading that.
