WELL LOGGING AND RESERVOIR EVALUATION Lorenzo Serra

This third book on Well Logging, focuses on reservoir evaluation of the main goal is the determination of the hydrocarbon volume existing in the drilled well and the discovered field. This evaluation requires the determination of several factors: the reservoir volume; the reservoir tectonic and stratigraphic settings (spatial & temporal position; the presence of fractures; the reservoir mineralogical composition; the hydrocarbon volume in place and extractible, which depends on the saturation of hydrocarbon in each unit composing the reservoir, which, in turn, depends on: the total pore volume of each unit composing the reservoir, the pore size, which is a function of the texture (grain size, sorting, packing...), the diagenetic effects affecting the initial porosity ((compaction, cementation, transformation, dolomitization, dissolution...) undergone since the deposition of the sediment; the hydrocarbon type; the permeability which depends on sedimentary features, fractures, dissolution and fluid type; the production potential that is a function of the permeability and the reservoir pressure. The determination of these factors will be considerably improved using a complete logging set including images of the borehole wall and nuclear magnetic resonance data and their interpretation by a team including geologist, geophysicist, petrophysicist and reservoir engineer in order to determine the depositional environment which can be precisely determined from well logging data, possibly calibrated on core data, taking into account: the facies of each depositional unit (composition, texture, internal structure, thickness); the type of facies succession composing genetic increment and genetic sequence. This determination, completed by the detection of the faults crossed by the well, will allow a more precise interpretation of seismic data and consequently a better modeling of the reservoir for its economical evaluation and development. Contains an exhaustive index-glossary referencing to the three books.

From reader reviews:

Markus Walker:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite e-book and reading a e-book. Beside you can solve your problem; you can add your knowledge by the guide entitled WELL LOGGING AND RESERVOIR EVALUATION. Try to face the book WELL LOGGING AND RESERVOIR EVALUATION as your buddy. It means that it can to get your friend when you feel alone and beside those of course make you smarter than before. Yeah, it is very fortunated to suit your needs. The book makes you considerably more confidence because you can know every thing by the book. So , we should make new experience and knowledge with this book.

Daniel Trimble:

Hey guys, do you wants to finds a new book to study? May be the book with the name WELL LOGGING AND RESERVOIR EVALUATION suitable to you? The actual book was written by renowned writer in this era. The particular book untitled WELL LOGGING AND RESERVOIR EVALUATION is a single of several books which everyone read now. This specific book was inspired many people in the world. When you read this reserve you will enter the new dimensions that you ever know just before. The author explained their plan in the simple way, consequently all of people can easily to know the core of this book. This book will give you a great deal of information about this world now. In order to see the represented of the world in this particular book.

Thomas Garrett:

The particular book WELL LOGGING AND RESERVOIR EVALUATION will bring one to the new experience of reading any book. The author style to explain the idea is very unique. In case you try to find new book to see, this book very acceptable to you. The book WELL LOGGING AND RESERVOIR EVALUATION is much recommended to you to learn. You can also get the e-book in the official web site, so you can quicker to read the book.

Jose Brown:

A lot of people always spent their free time to vacation as well as go to the outside with them friends and family or their friend. Do you know? Many a lot of people spent these people free time just watching TV, or even playing video games all day long. In order to try to find a new activity this is look different you can read some sort of book. It is really fun to suit your needs. If you enjoy the book that you just read you can spent all day long to reading a e-book. The book WELL LOGGING AND RESERVOIR EVALUATION it is extremely good to read. There are a lot of individuals who recommended this book. These were enjoying reading this book. When you did not have enough space to develop this book you can buy the e-book. You can m0ore simply to read this book out of your smart phone. The price is not to cover but this book has high quality.
