Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics)

Ioannis Argyros

Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) Ioannis Argyros

The book is designed for researchers, students and practitioners interested in using fast and efficient iterative methods to approximate solutions of nonlinear equations. The following four major problems are addressed. Problem 1: Show that the iterates are well defined. Problem 2: concerns the convergence of the sequences generated by a process and the question of whether the limit points are, in fact solutions of the equation. Problem 3: concerns the economy of the entire operations. Problem 4: concerns with how to best choose a method, algorithm or software program to solve a specific type of problem and its description of when a given algorithm succeeds or fails. The book contains applications in several areas of applied sciences including mathematical programming and mathematical economics. There is also a huge number of exercises complementing the theory.

- Latest convergence results for the iterative methods
- Iterative methods with the least computational cost
- Iterative methods with the weakest convergence conditions
- Open problems on iterative methods

From reader reviews:

Michelle Porter:

Have you spare time for just a day? What do you do when you have much more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their spare time to take a stroll, shopping, or went to the Mall. How about open or perhaps read a book allowed Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics)? Maybe it is to get best activity for you. You realize beside you can spend your time with the favorite's book, you can cleverer than before. Do you agree with their opinion or you have different opinion?

Maria Casillas:

Book is to be different per grade. Book for children until eventually adult are different content. As it is known to us that book is very important for us. The book Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) has been making you to know about other expertise and of course you can take more information. It doesn't matter what advantages for you. The book Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) is not only giving you considerably more new information but also being your friend when you experience bored. You can spend your spend time to read your book. Try to make relationship with all the book Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics). You never really feel lose out for everything in case you read some books.

Olivia Clinard:

The guide untitled Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) is the e-book that recommended to you to learn. You can see the quality of the publication content that will be shown to you actually. The language that publisher use to explained their way of doing something is easily to understand. The writer was did a lot of study when write the book, so the information that they share for you is absolutely accurate. You also can get the e-book of Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) from the publisher to make you far more enjoy free time.

Denise Barnhart:

That guide can make you to feel relax. This particular book Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) was multi-colored and of course has pictures around. As we know that book Computational Theory of Iterative Methods: 15 (Studies in Computational Mathematics) has many kinds or style. Start from kids until teens. For example Naruto or Private eye Conan you can read and believe you are the character on there. Therefore , not at all of book are generally make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading this.
