Nonradioactive Analysis of Biomolecules (Springer Lab Manuals)

Nonradioactive Analysis of Biomolecules (Springer Lab Manuals)

New techniques and updated protocols for the detection and analysis of biomolecules - proteins, glycoproteins and nucleic acids. The second edition of this successful laboratory manual describes in detail the highly sensitive systems which are widely used in molecular biological and biomedical laboratories, such as colorimetric, luminescence, fluorescence measuring using antibody/antigen binding or hybridisation as well as PCR amplification. The clearly structured step-by-step protocols with practical hints and a troubleshooting guide are complemented by chapters on the theoretical background and the application of the techniques, enabling scientists to plan, design and conduct the appropriate procedures.
