Data Mining for Global Trends in Mountain Biodiversity

Data Mining for Global Trends in Mountain Biodiversity

Thanks to advances in electronic archiving of biodiversity data and the digitization of climate and other geophysical data, a new era in biogeography, functional ecology, and evolutionary ecology has begun. In **Data Mining for Global Trends in Mountain Biodiversity**, Christian Korner, Eva M. Spehn, and a team of experts from the Global Mountain Biodiversity Assessment of DIVERSITAS explore two of the hottest subjects in science and technology: biodiversity and data mining. They demonstrate how to harness the scientific power of biological databases for furthering ecological and evolutionary theory.

Expert contributors address two aspects of the Global Mountain Biodiversity Assessment. They cover how to link biodiversity data with geophysical data and how to use biodiversity data to substantiate evolutionary and ecological theory. The text provides different methodological approaches and examples of successful mining of geo-referenced data in mountain regions on various scales. It includes:

- Elevational and latitudinal gradients in plant diversity
- E-mining trends in diversity of Lepidoptera, beetles, and birds
- Niche modeling to explain past trends and predict future trends in mountain biodiversity
- Sharing biodiversity data with the Global Biodiversity Information Facility

Using electronic databases opens ways to manage biodiversity in a sustainable fashion, test evolutionary and ecological theories, and measure the impact of climate change on various species and its effect on conservation efforts. The information and examples presented in this book can stimulate the creative use of archive data to answer old questions with new tools, and advance knowledge and understanding of mountain biodiversity worldwide. The book highlights the benefits of and the continuing need for an increase in the amount and quality of georeferenced data provided online in order to meet the challenges of global change.

From reader reviews:

Kara Corbett:

Here thing why this specific Data Mining for Global Trends in Mountain Biodiversity are different and reliable to be yours. First of all reading through a book is good but it depends in the content of the usb ports which is the content is as yummy as food or not. Data Mining for Global Trends in Mountain Biodiversity giving you information deeper and in different ways, you can find any publication out there but there is no publication that similar with Data Mining for Global Trends in Mountain Biodiversity. It gives you thrill examining journey, its open up your personal eyes about the thing that happened in the world which is possibly can be happened around you. It is easy to bring everywhere like in park your car, café, or even in your way home by train. For anyone who is having difficulties in bringing the imprinted book maybe the form of Data Mining for Global Trends in Mountain Biodiversity in e-book can be your option.

John Dudley:

This Data Mining for Global Trends in Mountain Biodiversity is great e-book for you because the content which can be full of information for you who have always deal with world and also have to make decision every minute. This specific book reveal it facts accurately using great plan word or we can claim no rambling sentences within it. So if you are read the item hurriedly you can have whole information in it. Doesn't mean it only will give you straight forward sentences but challenging core information with attractive delivering sentences. Having Data Mining for Global Trends in Mountain Biodiversity in your hand like finding the world in your arm, facts in it is not ridiculous one. We can say that no reserve that offer you world throughout ten or fifteen minute right but this book already do that. So , this can be good reading book. Hey there Mr. and Mrs. occupied do you still doubt in which?

Mary Moore:

As we know that book is vital thing to add our information for everything. By a guide we can know everything we really wish for. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year seemed to be exactly added. This book Data Mining for Global Trends in Mountain Biodiversity was filled regarding science. Spend your extra time to add your knowledge about your research competence. Some people has diverse feel when they reading the book. If you know how big selling point of a book, you can sense enjoy to read a reserve. In the modern era like currently, many ways to get book you wanted.

Stephen Redmond:

Publication is one of source of expertise. We can add our know-how from it. Not only for students but native or citizen will need book to know the up-date information of year to be able to year. As we know those publications have many advantages. Beside we add our knowledge, may also bring us to around the world. By the book Data Mining for Global Trends in Mountain Biodiversity we can have more advantage. Don't one to be creative people? To get creative person must like to read a book. Just choose the best book that acceptable with your aim. Don't always be doubt to change your life at this time book Data Mining for

Global Trends in Mountain Biodiversity. You can more pleasing than now.
